# MOUSTAFA MAHMOUD

in recognition of your participation in the Red Team Workshop  
March 1, 2022

You are eligible for 3.5 CPE credits

Oliver Tavakoli  
Chief Technology Officer  
Vectra

**VECTRA**<sup>®</sup>  
SECURITY THAT THINKS.<sup>®</sup>

# DESCRIPTION OF COURSE

This workshop helps individuals hone hacking skills in a simulated enterprise environment. In a step-by-step, moderated path participants will hack from start to finish, progressing through a real-world advanced attack.

The best defenders are those that are intimately familiar with attacker tactics. The Red Team Workshop was created from a need from security teams for an educational workshop that helps guide defenders on tactics and actions taken by adversaries; security teams are experts but not all have specific expertise in all hacking tools and tactics.

The Red Team Workshop helps individuals better understand the skills and tactics of the adversary. Participants will learn about the critical attack vectors and how attackers plot, ploy and work their way into enterprise vulnerabilities with a hands-on lab workshop, as they become the adversary. No hacking skills or special tools are needed as the workshop provides a step-by-step narrative from start to finish.
